Question: 42

Anything referenced from the Retail Store object that is outside of that object, for example the parent account or the Location (both standard salesforce objects) are considered to be... Foreign Key References, true or false?

- A. FALSE
- B. TRUE

Answer: B

Question: 43

What are Shapes in Layers?

- A. They define specific layers based on geographical locations of business significance, like adding the midCwestern states together in a single territory in a layer.
- B. Shapes define which standard or custom sf objects can be plotted in a SF Map.
- C. It is a custom object in Maps that regulates how data is presented in SF Maps and cna gather information from up to 6 objects
- D. They are filtered representations of the plotted records that Maps can present in a Map.

Answer: A

Question: 44

Can the Assortment of products be related at higher levels than a single Retail Store? For example to Retail Location Groups or even the Account?

- A. No
- B. Yes

Answer: B

Question: 45

What object can be used in CG cloud to sort products in categories?

- A. The Product Category object
- B. The Product2 object

Answer: A

Question: 46

Is every Order Product (junction object between Order and Product2) related to a Price Book via a price book entry that determines their price?

- A. Yes
- B. No

Answer: A

Explanation:

Yes, it is not inherited from the Product2's pricebook entries. Each Order Product has a price book entry to a given Pricebook, (this can be automatize to say, inherit the PB from the one used in the Account).

Question: 47

What can be used to limit the amount of records that are plotted in a Layer in Salesforce Maps?

- A. SOQL queries
- B. Filters
- C. Other Base Objects

Answer: B

Explanation:

Filters, like in Reports, only the records that satisfy those filters and are stored in Base Objects will be displayed on that layer.
